

FOREWORD

*“The seeds from
Ramanujan's garden have
been blowing in the wind
and have been sprouting
all over the landscape”*

—Freeman Dyson

This special issue commemorates the 127th birthday of Srinivasa Ramanujan, who still remains an inspiring figure to many a mathematician worldwide. Incidentally, 127 is an interesting number, being a Mersenne prime with $2^{127}-1$ also being one, a Cuban prime as it represents $3x^2 + 3x + 1$, and a Chen prime.

We are grateful to the authors for their excellent contributions to this issue, as well as to the unnamed referees for their careful reading and comments. We also thank the staff of IJPAM office, Dr. Sudhanshu Aggarwal and Mr. Rajan Phull, for their help in quickly bringing out the volume and for the attractive layout. Finally we thank the Academy for support in bringing out the issue.

Editors of the special issue
